Tyler Mitts

1+ 417-379-7404 - tmitts0206@gmail.com - linkedin.com/in/tyler-mitts-a67658375

EDUCATION

University of Missouri - Columbia **Expected Graduation: May 2027**

Bachelor of Science in Computer Science (GPA: 3.5 / 4.0)
Minor in Mathematics
Curators Scholar Award

EXPERIENCE

City of Willard Pool **June 2022 – August 2025**

Concessions Manager

Willard, MO

- Supervised and trained concession staff, fostering teamwork and enhancing leadership and management abilities
- Managed inventory and upkeep of equipment within concessions as well as maintaining health regulations.

University of Missouri Honors College **August 2023 – Current**

Front Desk

Columbia, MO

- Supported college events by preparing materials, welcoming guests, and managing phone calls.
- Served as first point of contact for students, faculty, and visitors, delivering accurate information and professional assistance.

Sigma Phi Delta - Engineering Fraternity **February 2024 – Current**

- Developed and managed content for fraternity social media to enhance fraternity recruitment and presence.
- Participated in philanthropy, helping the community through garbage collection, blood donation, and charity fund-raising.
- Collaborated with fraternity members to organize professional development, networking, and social events.

PROJECTS

Neural Network Research

Technologies: Python, TensorFlow, Keras, NumPy

- Applied forward propagation, ReLU/Softmax activation functions, and backpropagation with gradient descent to train the network on a training dataset for identifying outside images.
- Analyzed performance trends and identified limitations of small datasets, proposing improvements for generalization and scalability.
- Implemented image processing methods to increase neural network model performance.

Work Management App

Technologies: React Native Expo, Firebase Auth, AWS Lambda/Aurora DSQL, Phone Emulators

- Created UI for efficient use of managing work schedules, calendars, and notes with smooth execution with use of Expo APIs.
- Applied AWS APIs to build a secure and efficient backend, allowing for easy login authentication and database calls.
- Verified app performance across multiple virtual devices, screen sizes.

Film Production Database

Technologies: MySQL, Python

- Built and populated a MySQL database with a well structured schema to support project requirements.
- Developed Python functions to execute SQL queries for key business operations, including equipment reimbursement, employee assignment notifications, and project cost analysis.
- Designed and normalized an EER diagram and relational schema to model the film production workflows, providing a clear blueprint for efficient database implementation.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, Java, C

Frameworks and Tools: React Native/React Native Expo, MySQL, Firebase Auth, Aurora DSQL, AWS Lambda TensorFlow, Keras, NumPy, Git
